<thead>
<tr>
<th>Chapter 1:</th>
<th>A Study on the Effects of an Increase of Pension Benefits on Saving Rate and on Labor Force Participation Ratio using Panel Data Analysis.</th>
</tr>
</thead>
</table>
| Introduction | 1. Data and International Comparison  
1.1 Contents and source of the data  
1.2 International Comparison and Time Series Transition |
| 2. Panel Data Analysis | 2.1 Estimation Model  
2.2 Fixed Effect and Random Effect Model  
2.3 Estimation by Dynamic Panel Model |
| 3. Dynamic Analysis of Panel Data, PVAR model, and Impulse Response Function | 3.1 Unit Root Test of the Panel Data  
3.2 PVAR Model and Impulse Response |
| Concluding Remarks | References |
| Tables and Figures | |

<table>
<thead>
<tr>
<th>Chapter 2:</th>
<th>Cohort experiences of labor force behavior and its implications for sustainability of the public pension system in Japan</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abstract</td>
<td>1. Introduction</td>
</tr>
</tbody>
</table>
| 2. Labor supply behavior of cohorts | 2.1 Data and definitions  
2.2 Participation in the labor market by men  
2.3 Participation in the labor market by women  
2.4 Comparison with previous studies |
2.5 Comparison with other countries
3. Cohort movement of wage-salary earnings
   3.1 Cohort wage-salary earnings of husbands and wives
   3.2 Family earnings by cohort
4. Implications on sustainability of the pension system
   4.1 Labor supply responses to reduced levels of Social Security Wealth
   4.2 Enrollment in Public Pension
   4.3 Implications of changes in participation and earnings on retirement saving
5. Conclusion

Chapter 3:
Is the 2004 Pension Plan Revision the Final Answer?:
Evaluation using Generational Accounts

Abstract
1. Introduction
2. The 2004 pension plan revision and academic debates
   2.1 The 2004 pension plan revision
   2.2 Academic debates
3. Introduction to generational accounts
   3.1 What is the GA?
   3.2 Why is the GA useful?
4. Main results
   4.1 Basic result without revision
   4.2 Effect of fixing future premium levels
   4.3 Effect of macroeconomic indexation
   4.4 Joint effect of both proposals
5. Conclusion

Chapter 4: Public Pension Reform in Japan: Is the Swedish Pension System Useful?

Abstract
1. Introduction
2. Theoretical Framework
   2.1 Household Behavior
3. Simulation Analysis
   3.1 Method of Simulation
   3.2 Simulation Cases
   3.3 Specification of Parameters
4. Simulation Results
   4.1 Findings and Policy Implications
5. Reduction of minimum guaranteed pension benefit
6. Conclusions
Appendix A
Appendix B

Chapter 5: Covering part-time Workers by Employee's Pension Insurance: A Simulation Analysis with Overlapping Generations Model

Abstract
1. Introduction
2. Composition of model
3. Assumptions of simulation analysis
   3.1 Specification of parameters
   3.2 Method of simulation
   3.3 Simulation scenarios
4. Results of simulation
   4.1 Comparison from the viewpoint of economic efficiency
   4.2 Comparison from viewpoint of sustainability of pension finances
   4.3 Comparison regarding additional consumption tax
Chapter 6:
Social security and intra-generational income redistribution in Japan

Abstract
1. Introduction
2. Analytical Framework
   2.1 Income redistribution: the elderly vs. the young
   2.2 Income redistribution: annual income vs. lifetime income
3. Empirical analysis on an annual income basis
   3.1 Data
   3.2 Redistribution by social security
   3.3 Decomposing redistribution effects
4. Empirical analysis on a lifetime income basis
   4.1 Data
   4.2 Distributive impact of post-2004 Reform EPI program
   4.3 Alternative reforms
5. Concluding remarks
