

The recovery of industrial production remains very insufficient.

Nevertheless, the recent rapid developments of diversification can be seen.

Some consumer durables including home-made passenger cars also began to be boosted but the Lehman shock

The renovated boost of the auto-industry is one of the key factors for the Russian diversification.

The characteristics of the Russian auto-industry

Low value-added ratio and high tax

Low intermediate demand, high consumption and investment, and high imports

And failure of government policy for the developments in the auto-part industry including SME;

impossibility of land of cocaine

The renovated boost of the auto-industry is one of the key factors for the Russian diversification.

Table 1. An International Comparison of Auto-industry

Country	Year	GDP share %
Japan	2000	1.6
USA	2000	1.2
Germany	2002	3.1
China	2002	1.5
India	2003/2004	0.1
Russia	1987	2.4
	1995	0.9
	2004	1.2
